COMP2018 – Advanced Web User Interface Design

IN-CLASS EXERCISE
Installing the Boilerplate

DESCRIPTION
Download, configure, and install an instance of a web page using the latest version of HTML5 Boilerplate. Observe how a few different HTML and CSS elements and properties appear in a variety of browsers.

INSTRUCTIONS
1. Download a current copy of the HTML5 template from http://html5boilerplate.com/.
2. Using the provided short article as your content, build a simple HTML5 page and insert the markup in the index.html template where instructed by the boilerplate comments.
3. Apply a few simple CSS styles in the boilerplate main.css file to change the appearance of your document – take care to put the CSS styles where they belong according to the boilerplate CSS comments.
4. Upload the entire set of files and folders to a webserver.
5. View the resulting page on a variety of platforms, browsers, and devices.

EVALUATION

Criteria	Mark
Exercise is complete and submitted by the end of the day.	Complete
Exercise is incomplete or not attempted.	Incomplete
